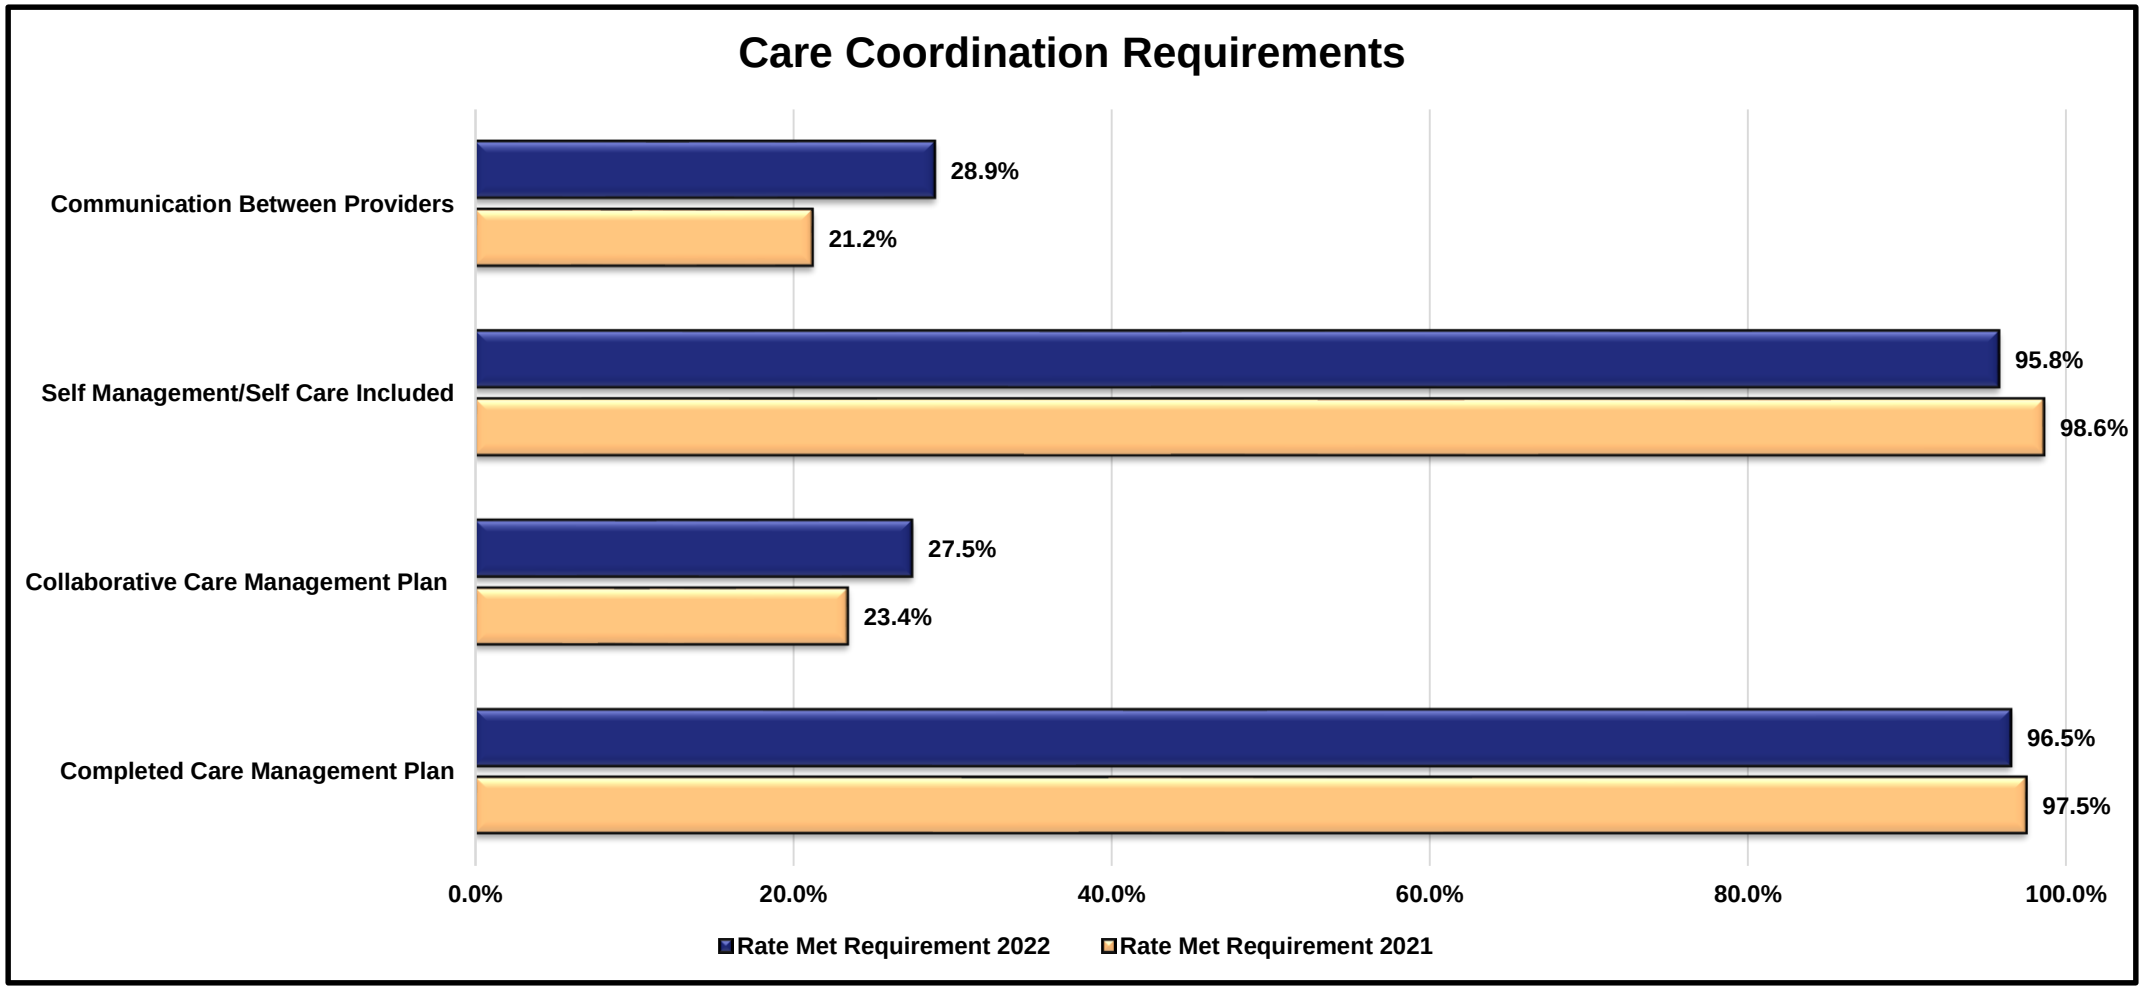
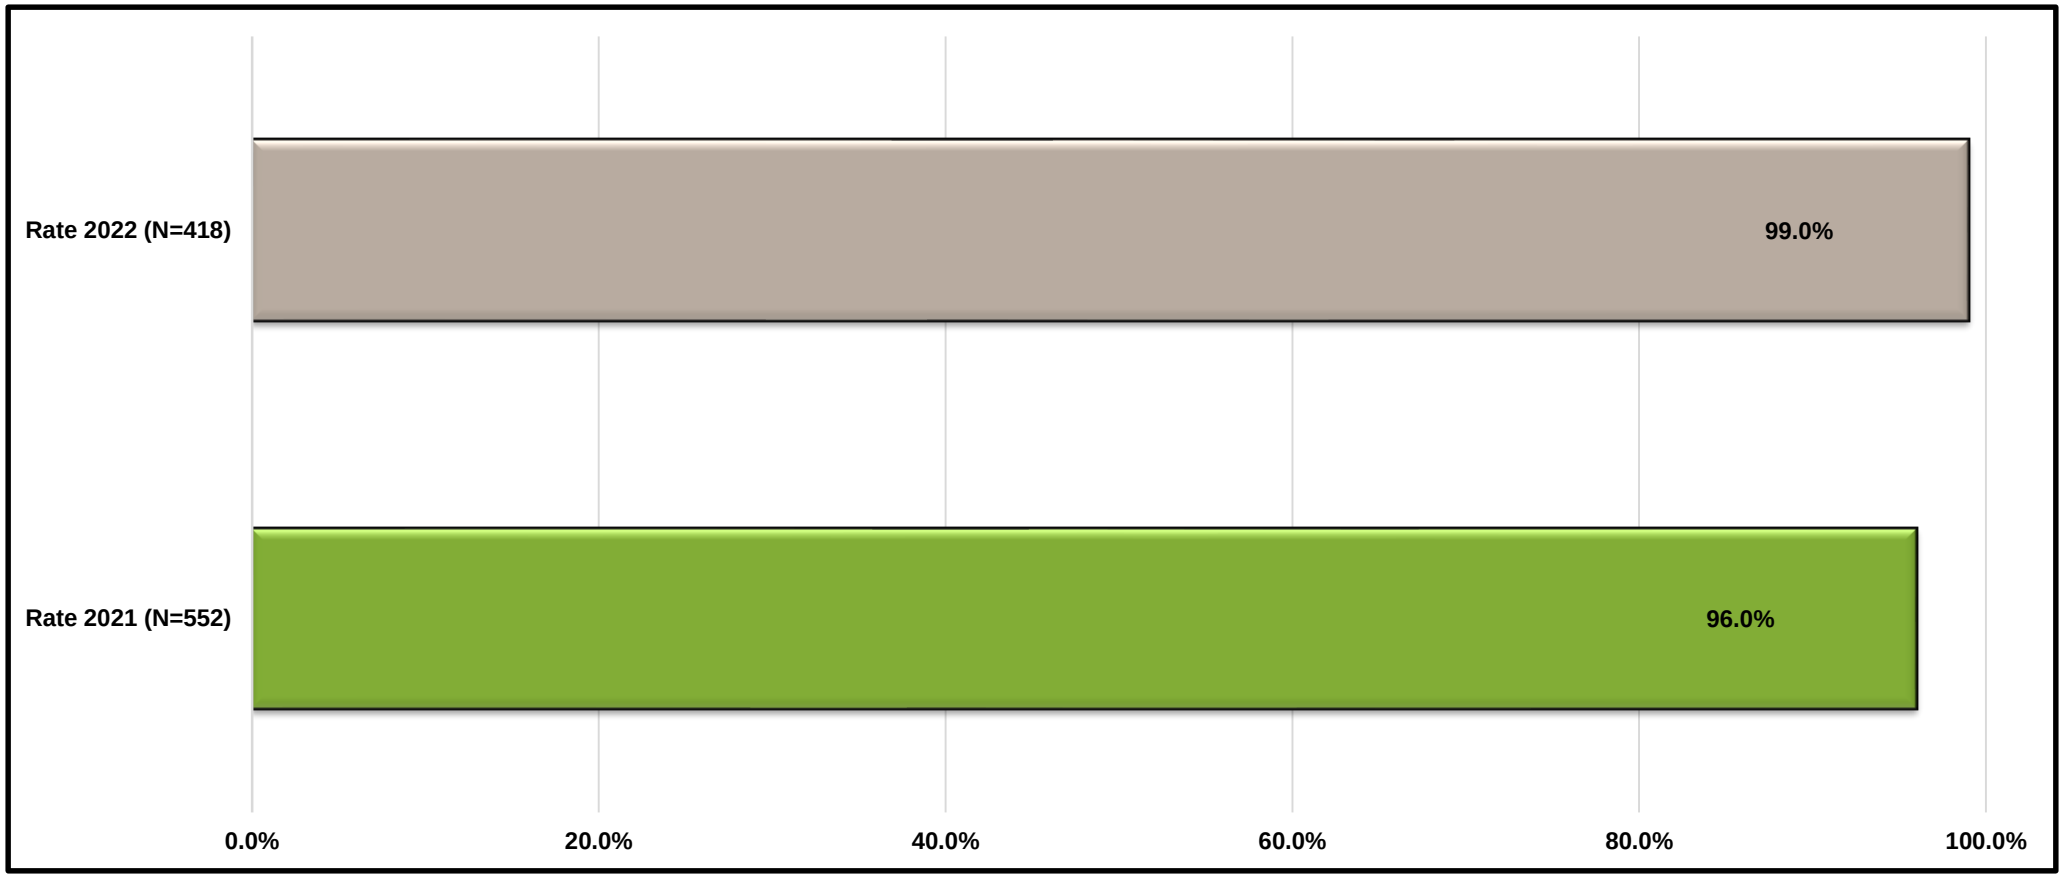
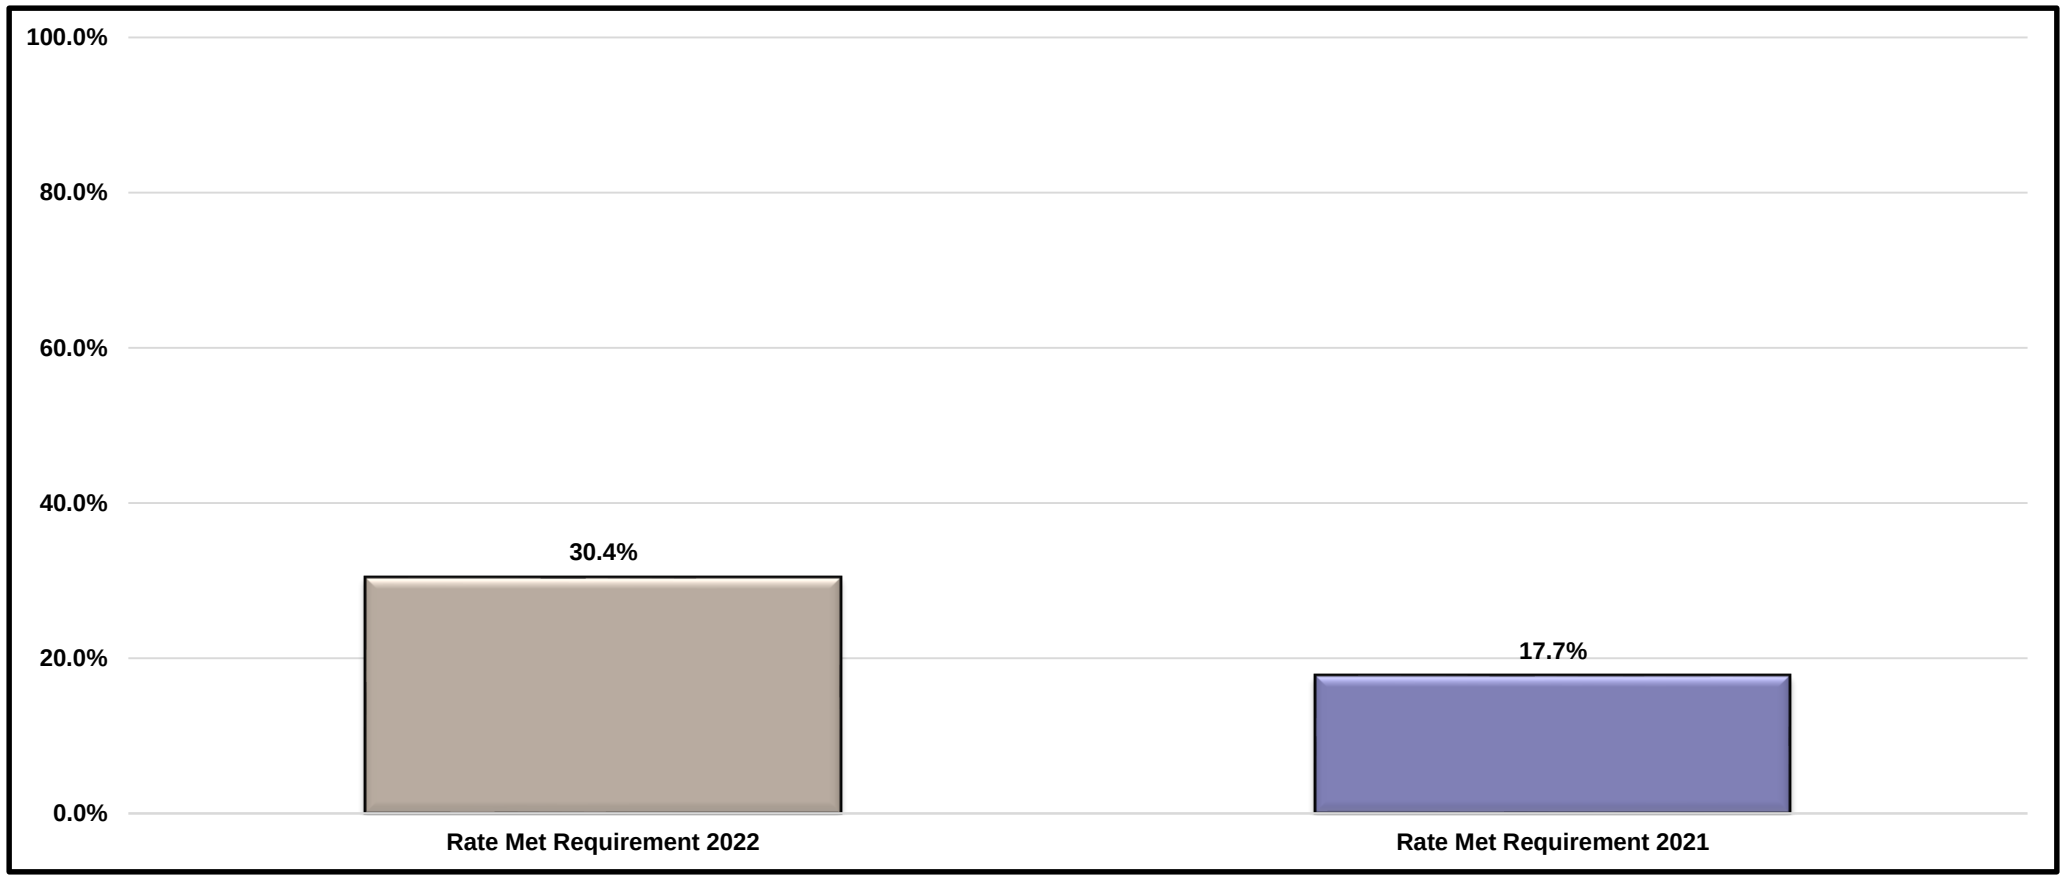
Care Coordination Requirements



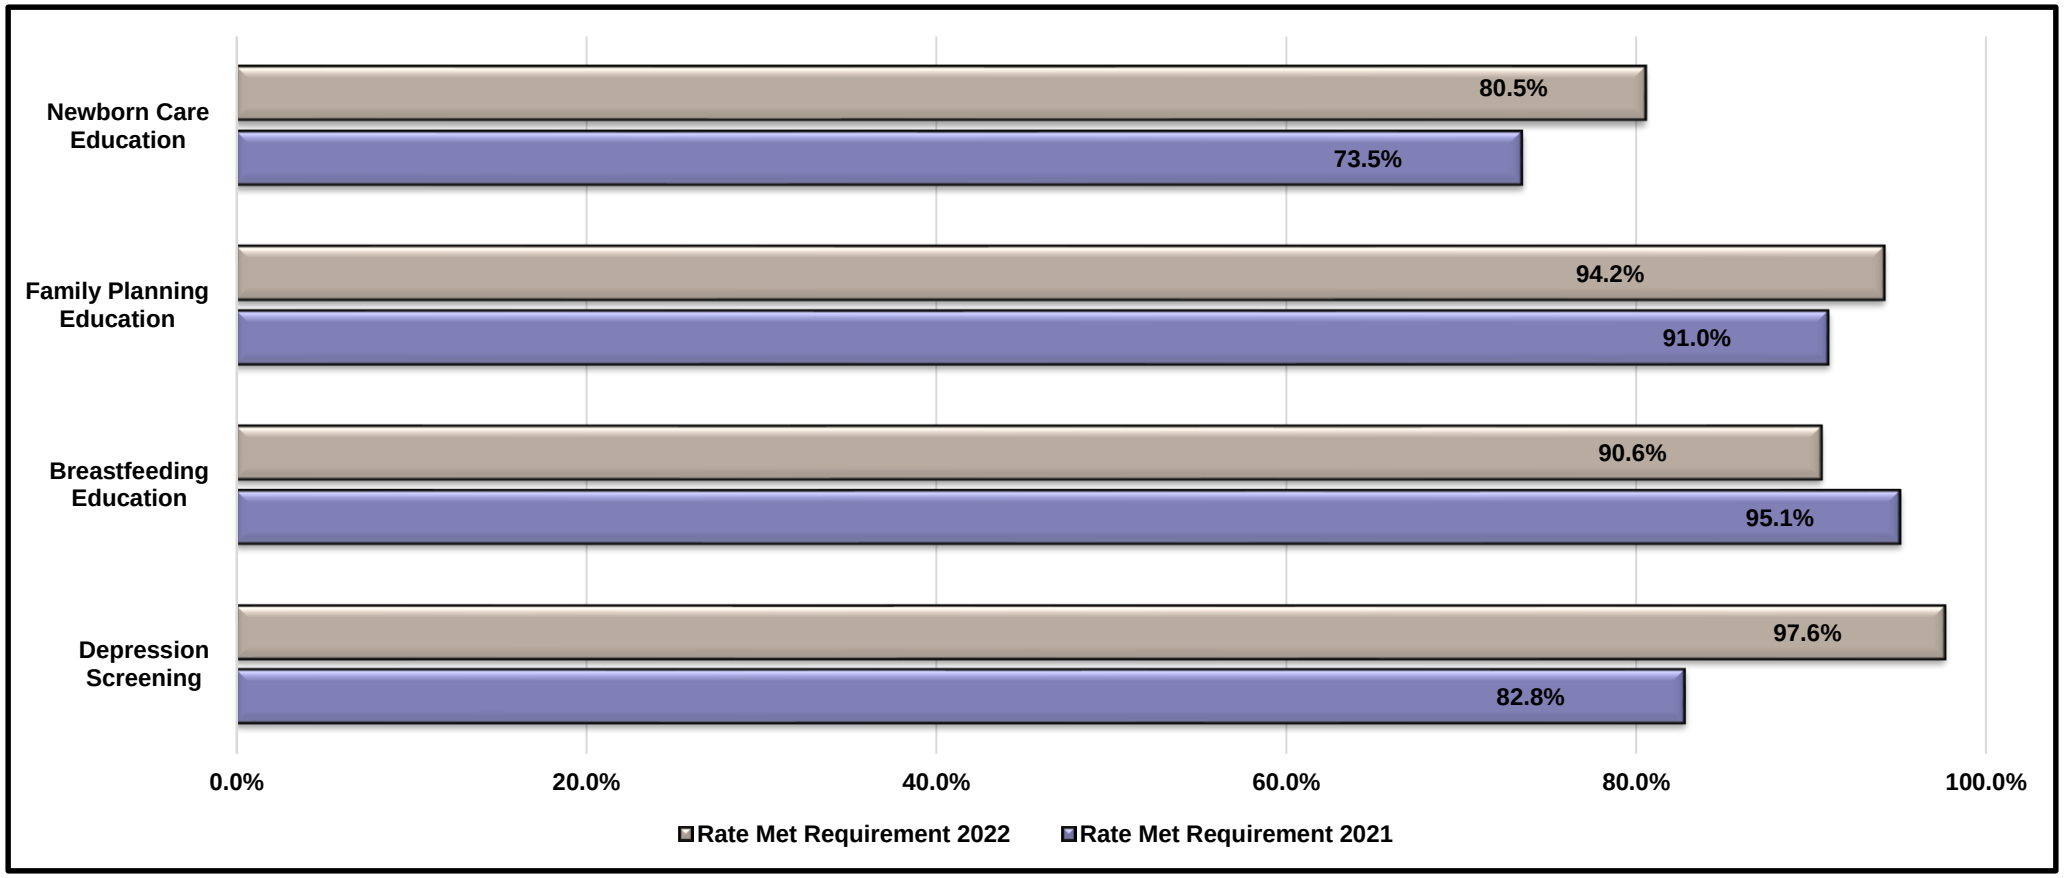
Follow Up-Chronic Condition



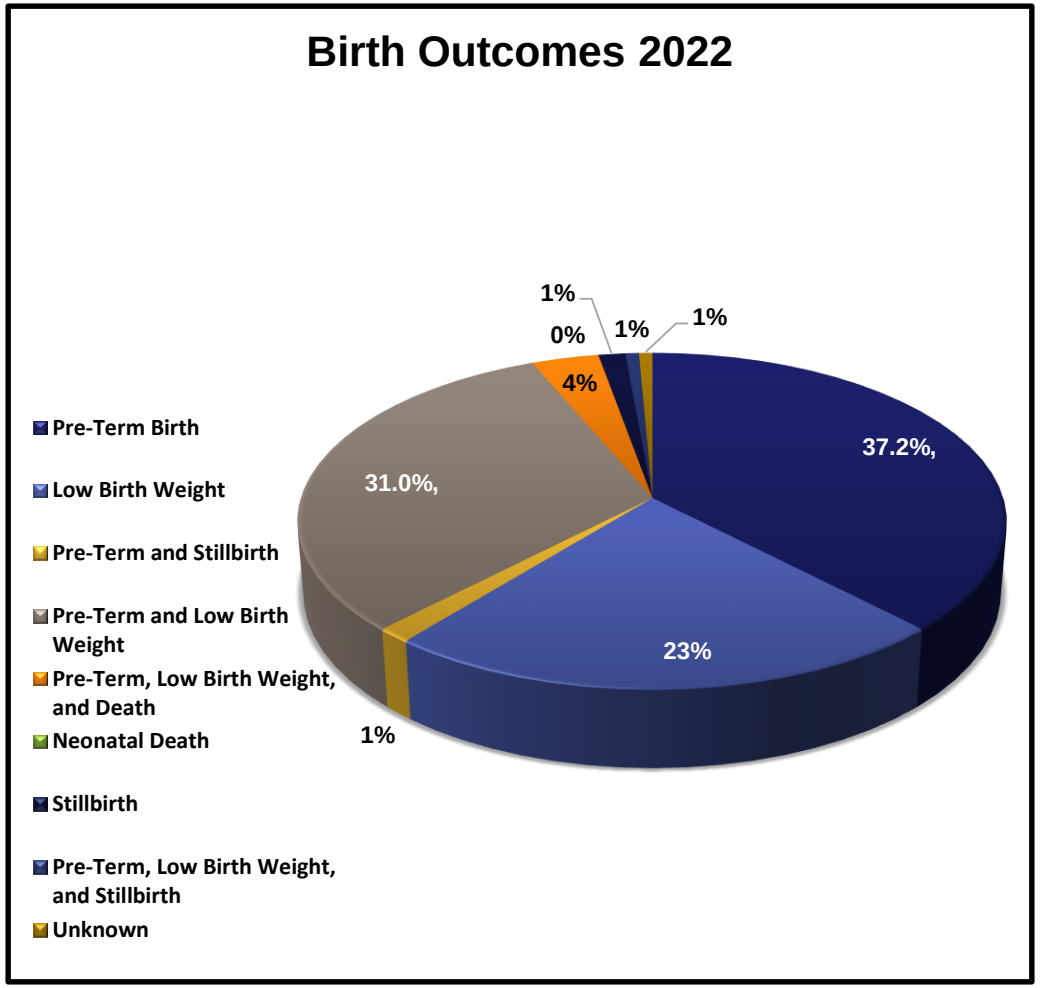
Home Visit Offered

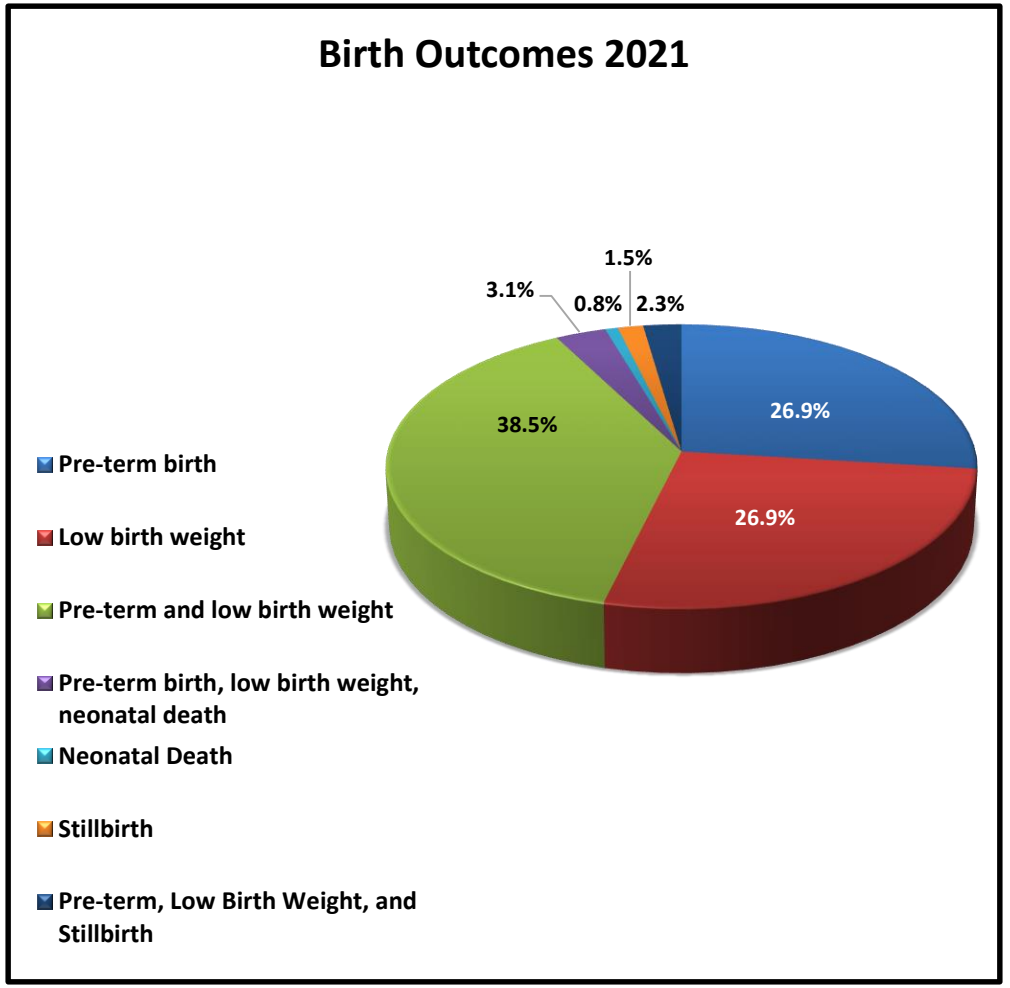


Education and Screening

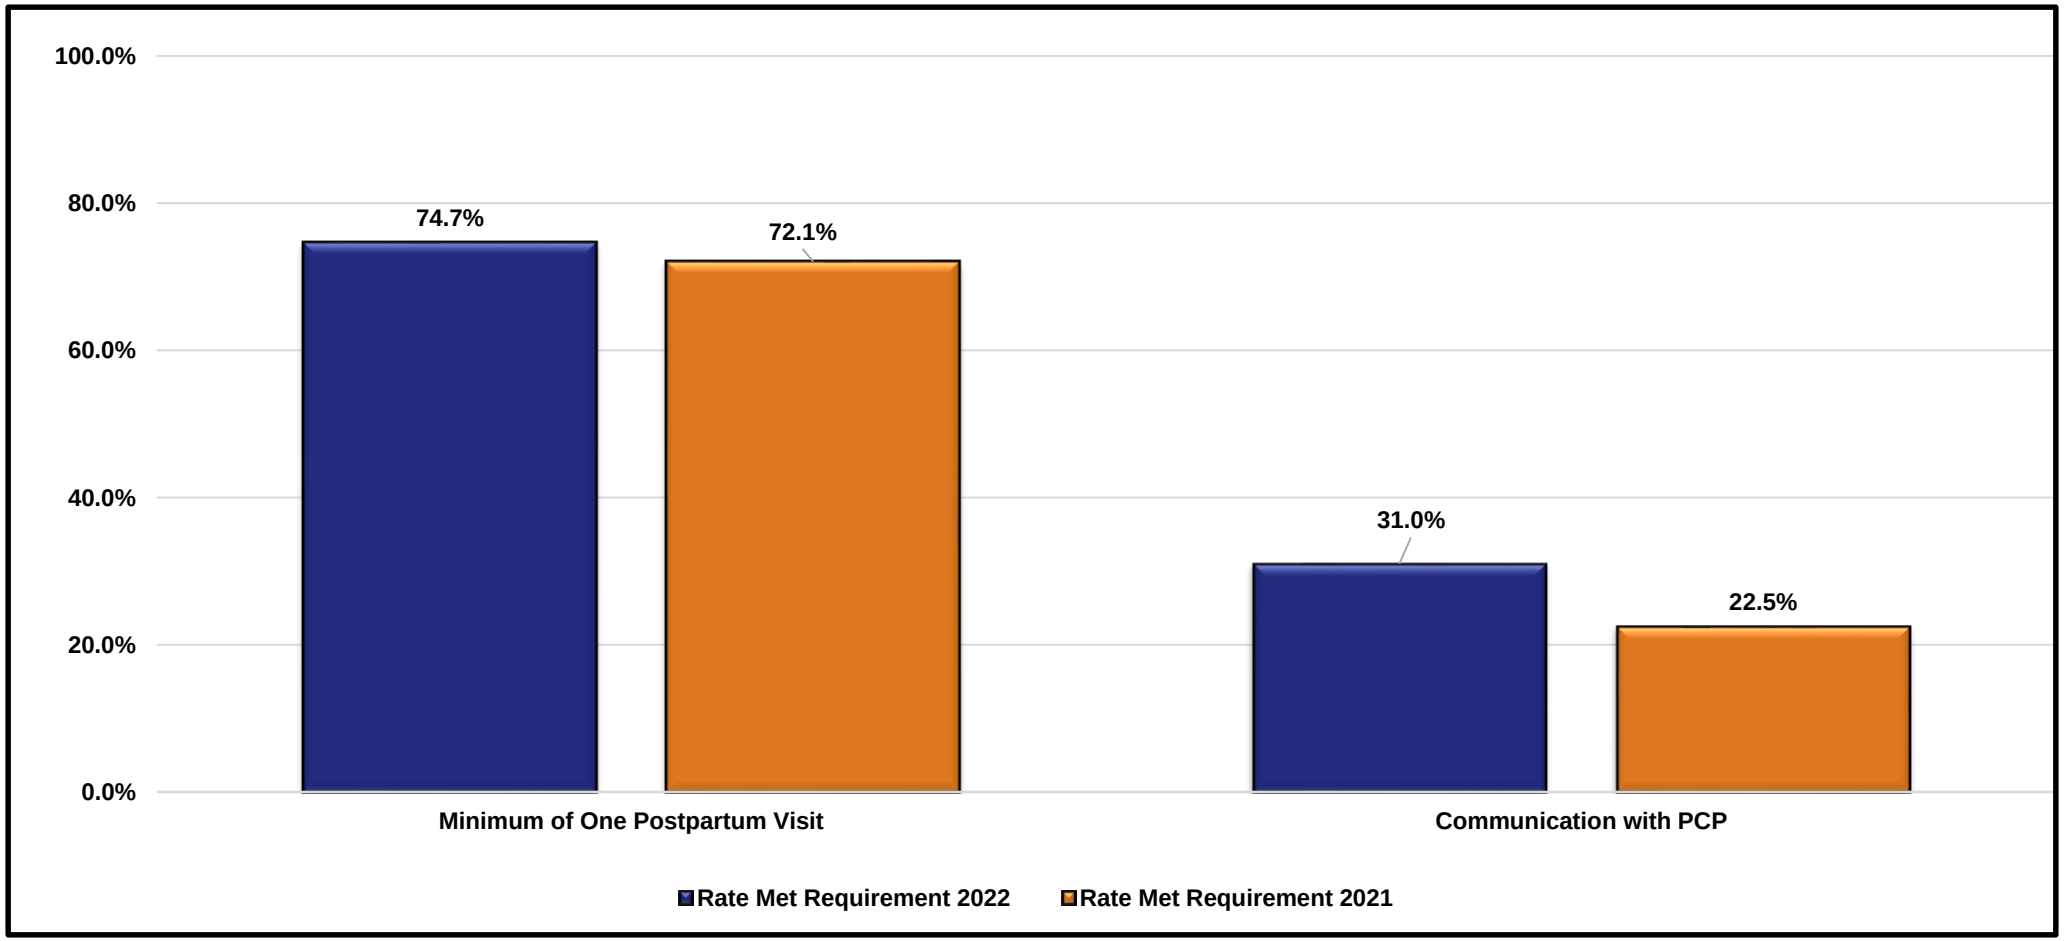


Poor Birth Outcomes-Year-to-Year Comparison





Postpartum Care Coordination Requirements



Strengths

- Records demonstrate members are being enrolled within the first sixteen weeks of pregnancy.
- Prenatal care is encouraged and coordinated as demonstrated through prenatal visits which allowed a high level of follow up for chronic conditions.
- Clinics are completing care plans with members.
- Clinics are conducting frequent assessments of depression and providing interventions to address throughout the prenatal and postpartum periods.

Opportunities for Improvement

- Conducting and documenting collaborative care plans. The care plans indicate collaboration when documentation includes evidence the care plan was created in conjunction with the care coordinator, the primary care provider (PCP), and the member.
- Increasing collaboration between the primary care provider and obstetric care team.
- Improving members' engagement in their postpartum care to increase the rate of postpartum visits.
