# Diagnosis Code-Restricted Physician-Administered Drugs

The following table contains information on diagnosis-restricted physician-administered drugs for professional claims. For each drug, the corresponding HCPCS procedure code and ICD diagnosis code(s) and disease description(s) are listed. If the member's diagnosis is not an allowable diagnosis for the code listed on the Diagnosis Code-Restricted Physician-Administered data table, prescribers are required to obtain prior authorization (PA). See the Pharmacy Resources page link below for diagnosis-restricted drugs for pharmacy compound and noncompound claims.

If a prescriber orders a physician-administered drug with a diagnosis outside the ForwardHealth- allowed diagnosis for a drug, the prescriber must submit peer-reviewed medical literature to support the proven efficacy and safety of the requested use of the drug. The prescriber also must include documentation of previous treatments and detailed reasons why other covered drug treatments were discontinued or not used. Medical records should be provided as necessary to support the PA request.

This information should be documented in Section IV (Clinical Information for Diagnosis-Restricted Physician-Administered Drug Requests) on the Prior Authorization/Physician-Administered Drug Attachment (PA/PAD) form, F-11034 (07/2022).

When completing the PA/PAD form, prescribers should provide the diagnosis code and description, complete Section IV, and use Section VII (Additional Information) if needed. Prescribers are reminded to sign and date the form before submitting the PA/PAD form and the Prior Authorization Request Form (PA/RF), F-11018 (05/2013) to ForwardHealth. Clinical documentation supporting the use of the physician-administered drug must be submitted with the PA request.

As a reminder, prescribers and pharmacy providers are required to retain a completed copy of the PA form(s).

For additional information about diagnosis restricted physician-administered drug policy, providers may refer to ForwardHealth Online Handbook topics, #506 and #22580.

<sup>\*\*</sup> Each botulinum toxin (BT) product available in the U.S. has distinct pharmacological and clinical profiles specified on the product insert. Dosing patterns are also specific to the preparation of BT and are very different between serotypes. It is expected that providers will be familiar with and experienced in the used of these agents and utilize evidence-base medicine to select the appropriate drug and dose regimen for each patient condition.
