Diagnosis Code-Restricted Physician-Administered Drug

The following table contains information on diagnosis-restricted physician administered drugs. For each drug, the corresponding HCPCS procedure code and ICD-10 diagnosis code(s) and disease description(s) are listed. When one of the drugs is billed for a disease state listed for the drug, the drug does not require prior authorization (PA). When billing one of these drugs for a disease that is not listed below, PA is required. Peer-reviewed medical literature supporting the efficacy of the drug for the disease state must be submitted with the PA request.

The information above only applies to billing of these services on a professional claim.

Note: This table includes Wisconsin Medicaid's most current information and may be updated periodically.

** Each botulinum toxin (BT) product available in the U.S. has distinct pharmacological and clinical profiles specified on the product insert. Dosing patterns are also specific to the preparation of BT and are very different between serotypes. It is expected that providers will be familiar with and experienced in the used of these agents and utilize evidence-base medicine to select the appropriate drug and dose regimen for each patient condition.
